INDUSTRIAL SOLUTIONS

Performance Products and Coatings

Superior Protection for Challenging Applications and Environments

Coatings Expertise for Best-in-Class Asset Protection

We specialize in advanced industrial coatings to meet extreme environmental and application factors. Our NACE and SSPC-certified sales consultants will perform on-site evaluations to help you determine the specific application and environmental pressures your projects place onto their protective coatings.

Unlike our competitors, who are eager to sell you "off-the-shelf" products, we fully survey and specify your protective coating needs, offering a coating specification to protect valuable assets against those unique environmental (chemical, heat, etc.) and application (abrasion, flexibility, etc.) challenges.

25+ Years of Advanced Industrial Coatings

For more than 25 years, Riteks has been providing highly technical custom coating solutions to a wide range of demanding industries, including marine, bridges, power generation, oil and gas, and mining.

Long-Term Commitment to Protecting Your Assets

Our relationship with our coating customers is on-going: our success is dependent on your long-term success using our coatings.

We follow-up with our customers to make certain our mutual goals are being met: namely, providing a valued solution that keeps your assets up and running for years to come.

Find Out How We Can Optimize Your Protective Coatings

Call or email us with the specific coating challenges you face. We'll then arrange for one of our technical consultants to do a detailed on-site survey of your project to develop a custom, unmatched coating solution.

Advanced Coating Solutions

- Long-term corrosion protection
- Robust protection against aggressive chemicals
- High-temperature coatings
- Protective linings and abrasion-resistance
- Highly flexible coatings
- Various application-specific coating technologies
